

CONTRACT REPORT

Customer:
Biotech Facility

Boiler Type
150K PPH Victory Boiler

Boiler Model:
LCN550

Fuel Fired:
Natural Gas

Tech Centre
Ware

Confidence in Limpsfield results in big savings on a 150,000 lbs/hr water tube boiler!

We are very excited to share this contract report, especially seeing the results exceed the customer's expectation, which led them to place another order recently for their 2nd boiler.

This Biotech company is more than 100 years old and still family owned. They produce soybeans, protein meals, lecithin, and various blends of refined vegetable oils for human consumption.

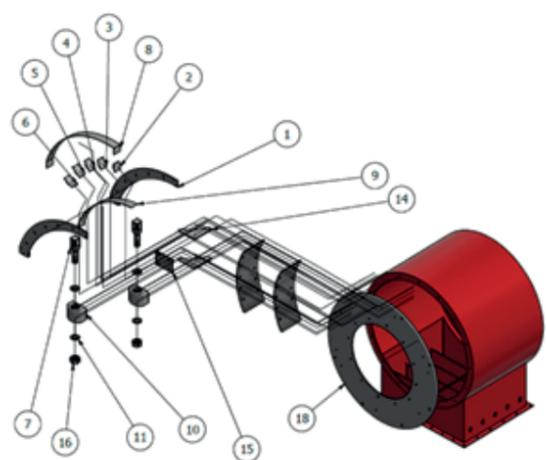

Another great effort and thank you to the team at Ware. They have put their trust in our products for many years and have had the confidence to guarantee a minimum of 3% savings on this project to cover the premium the client paid for the package provided.

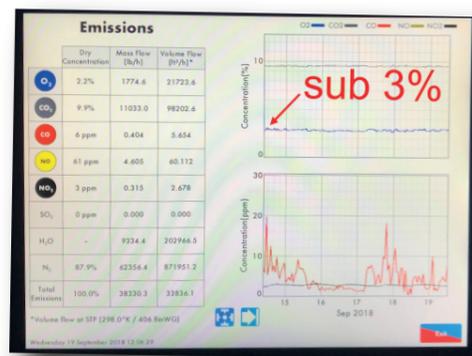

The customer has placed the order for the 2nd burner without asking a question!

Project Achievement :

1. Limpsfield's high performance burner keeps O2 levels below 3% throughout the whole firing range.
2. High turndown ratio – achieved 10:1.
3. Large flame viewing port with a fully hinge assembly – can be accessed/removed with simple man power, allows for an easy service and complete flame view.
4. Autoflame EGA (Exhaust Gas Analyser) installed – emissions monitoring (CEMS) and O2/CO/CO2 trim with constant data logging.

Limpsfield Burner Hinge design

EGA Record - O2 3%

Guaranteed Saving
